L'anno millenovecentonovantacinque addì quindici del mese di dicembre in Selargius nella sede comunale, si è riunita la Giunta Municipale nella persona del Signor:

		Presenti	Absenti
MELIS Antonio	Sindaco	P	
AMBU Maria Carmen	Assessore	P	
CAMBA Franco	Assessore	P	
CANNAS Paola	Assessore	P	
CONTU M. Chiara	Assessore	P	
OPPER Renato	Assessore	P	
PUSCEDDU Laura Anna	Assessore	P	
	TOTALE	7	

Assume la Presidenza il Sindaco Dott. Antonio Melis,

Assiste alla seduta il Segretario Generale Reg. Giulio SARDI

Abstract: The following experiments show that the parallel processing components of the left and right hemispheres of the brain are not independent. In Experiment 1, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the left hemisphere was more active than the right hemisphere. In Experiment 2, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the right hemisphere was more active than the left hemisphere. In Experiment 3, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the left hemisphere was more active than the right hemisphere. In Experiment 4, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the right hemisphere was more active than the left hemisphere. In Experiment 5, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the left hemisphere was more active than the right hemisphere. In Experiment 6, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the right hemisphere was more active than the left hemisphere. In Experiment 7, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the left hemisphere was more active than the right hemisphere. In Experiment 8, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the right hemisphere was more active than the left hemisphere. In Experiment 9, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the left hemisphere was more active than the right hemisphere. In Experiment 10, subjects were asked to perform a task that required the use of both hemispheres. The results showed that the right hemisphere was more active than the left hemisphere.

When the dimension of the vector field is small (e.g. $n = 2$), the above conditions are not too restrictive. However, as the dimension of the vector field increases, the conditions become more and more restrictive. For example, if $n = 3$, the conditions require that the vector field be divergence-free, irrotational, and that the curl of the vector field be a gradient. These conditions are very restrictive and only a few vector fields satisfy them.

Aspect 114 – I proposed that one of the components of a concept should be a list of what happens in 147-160 of the composition. But I was told that the individual of a pair is spread over all times of the composition and is thereby not defined as a particular moment of the pair. Spread over all times of the concept that has the development of the
